

# Nathan Au

Montréal, QC, Canada • [im.nathanau@gmail.com](mailto:im.nathanau@gmail.com) • [nathan-au.github.io](https://nathan-au.github.io) • [/in/-nathanau](https://in/-nathanau)

## Education

### Concordia University

Bachelor of Engineering – Software Engineering, Co-op

- GPA: 3.3/4.0

Montréal, QC

2024 – 2028 (expected)

### West Carleton Secondary School

OSSD, Information and Communications Technology SHSM, Co-op

Ottawa, ON

2020 – 2024

## Experience

### Mobile Application Developer

Nov. 2024 – Apr. 2025

Google Developer Group on Campus Concordia University

Hybrid / Montréal, QC

- Earned team recognition for Best UI/UX, Best Presentation, and 2nd Place Winning Team.
- Collaborated in a 4-person team to plan, design, and develop Amicae: an app connecting students with peers, study spots, and events (*see Projects*).
- Applied Agile methodology through 2-week Scrum sprints to prioritize high-impact tasks, develop features iteratively, and incorporate user feedback.
- Produced the official launch video to highlight core functionality and pitched the app at Flutter Montréal and Concordia University to 100+ students and professionals.

### Engineering Intern – Hardware & Electronics

Sep. 2023 – Feb. 2024

Renaissance Network Reinvent

Ottawa, ON

- Engaged in the full product repair cycle: testing → debugging → repair → assembly → quality control, while adhering to ESD safety protocols.
- Debugged and repaired 200+ units (e.g., circuit boards, server fans, power supplies) using electronic test instruments and component-level soldering techniques.
- Reduced material costs by salvaging 75+ microchips and various electronic components from unrepairable circuit boards.
- Tracked inventory of 1,000+ repair components using barcode-enabled data capture and Excel-driven tracking.

## Projects

**Reel Digest** | Python, Ollama, SQLite, Telegram Bot API, yt-dlp | [Source Code](#)

Dec. 2025

Messaging-based productivity service that processes short-form content and generates concise text summaries.

- Designed an audiovisual media processing pipeline: URL validation → video download (yt-dlp) → audio extraction → speech transcription (Google Speech Recognition) → LLM-based summarization (Ollama) → persistent storage (SQLite).
- Built a relational persistence layer to track users, content outputs, and junctions to enable history tracking and prevent duplicate data processing.

**RPG-Mini** | Python, FastAPI, Ollama, SQLite, SQLAlchemy, Pytest, Pytesseract | [Source Code](#)

Oct. 2025

End-to-end API framework that automates document intake, classification, and data extraction for tax accounting workflows.

- Engineered a two-layer document classification algorithm with optical character recognition (PyMyPDF + Pytesseract) and keyword-based matching to identify known document types.
- Integrated LLM-powered data field extraction to transform unstructured OCR text into machine-readable JSON.

**Amicae** | Flutter, Dart, Firebase, Vertex AI, flutter\_map, Concordia Open Data API | [Source Code](#)

Apr. 2025

Mobile app that helps Concordia students make connections, explore study spots, and stay up to date on campus events.

- Implemented Amicae Matchup AI for personalized, data-driven match recommendations with Gemini LLM integration from Vertex AI.
- Automated the delivery of upcoming campus events and study spots in real time with the Concordia Open Data API and flutter\_map geolocation services.
